Cow manure fuels our anaerobic digester, producing biogas for electricity and heat.

Green Entrepreneurship Seminar:

MORRISVILLE STATE COLLEGE
RENEWABLE ENERGY TRAINING CENTER

A Regional Summer Program for High School Students*

June 29 - July 3, 2009

Morrisville State College
Morrisville, NY 13408

"I have not failed. I've just found 10,000 ways that won't work."
~ Thomas Alva Edison

This short course is an introduction to green entrepreneurship. During this week-long event, students will participate in daily field trips and hands-on activities, exploring the latest trends in the growing green market including renewable energy technologies (solar, wind, hydroelectric, and biomass power, among others), locally-grown food and fuels, eco-friendly clothing, green cars, as well as new "green" opportunities in more conventional ventures including dairy farming, aquaculture, horticulture, and waste management. Students will explore the steps necessary for creating a start-up venture in these emerging environmental fields through fast-paced, hands-on activities that highlight creativity and innovation, team building techniques, research techniques, and presentation skills.

Week-Long Green Entrepreneurship Seminar

A Regional Summer Program at Morrisville State College for High School Students
